

Notice of Environmental Remediation Activities

Orphan Site Program

Former Lobell Refinery
Casper, Wyoming

All area businesses will remain open, and WDEQ/OSRP will strive to minimize unnecessary impacts to surrounding businesses. Again, please be aware that heavy equipment will be entering and leaving the area routinely for the duration of the project. If you have any questions or concerns about this project, please contact the WDEQ project manager: Cindi Martinez (307) 777-2948, or email cindi.martinez@wyo.gov. A map of the project area can be found on the back of this announcement.

The Wyoming Department of Environmental Quality Orphan Site Remediation Program (WDEQ/OSRP) plans to conduct environmental remediation activities in the area of 334 South Wolcott Street beginning July 30, 2012, and continuing through most of August. This work will include closure of the block of Wolcott, from the Rails to Trails pathway to the intersection of Collins Drive and Wolcott Street. The Rails to Trails pathway will remain open; please be aware that heavy truck traffic will be entering and leaving the area. With OSRP oversight, contractors will remove the asphalt and other street materials and excavate the hydrocarbon-impacted soils and acidic sludge that have been identified under the street. These impacted materials are the result of activities conducted at the former Lobell Refinery, which operated in the area from approximately 1896-1911. Once the materials are excavated, a soil reclaimer will mix a neutralizing agent with the soils, and haul trucks will dispose of the materials at the Casper Landfill. All activities will be conducted on site, and the area will be fenced and barricaded for public safety. Environmental monitoring will be ongoing throughout the project to ensure that members of the community are protected from any type of chemical exposure.
